## Online "195 days. From the invasion of Ukraine to the IAEA mission in Zaporizhzhia. The diary of events"

The ongoing war in Ukraine has reminded the public that, not far from us, there are nuclear plants in operation and that the threat of war attacks hangs over them.

Does the technology behind the operation of Ukrainian power plants make them vulnerable? And how much? What is really happening a few thousand miles from our homes? How does the news reach the competent authorities, through which channels?

Let's try to answer these and many other questions with a diary of the first 195 days of the conflict.

A story, which wants to be objective, relating to the period from 24 February to 6 September 2022.

The publication is available [here](#) [1].
